

Powder Original Board

(0:23) Elysia here with Si Boards, and I'm here to introduce our Powder Original board.

Key Features (0:40)

The Powder Original board is perfect for your off-season training as you get ready to hit the slopes. We have a special design feature where we cut the middle out and left the ends wide, so this is quite different from our regular elliptical-shaped boards. What this does is it allows you to transfer your momentum from the center to the ends very, very quickly. If you're doing spins and tricks on this board, since the middle is so fast and the ends are balanced, they are a lot of fun.

Ideal User Height (1:19)

This board features a small rail, so it's actually suited for a rider who is 4' (1.2 m) tall all the way up to a 6' (1.8m) tall rider. It's very unique because you have a small rail in combination with a larger board top.

Board Specifications (1:41)

The size of the Powder Board is 41" (104 cm) tall by 15" (38 cm) wide. The board weighs 10 lbs. (4.5 kgs). It's still a significant amount of weight to carry and to start moving, however, since it is lighter, it will be easier to move compared to our larger boards. Our Original boards feature the ½" birch plywood in combination with your urethane rail block and your steel rail system. This board has an extreme rocker that you can see, because of the length of the board in combination with the smaller rail.

(2:30) The rail size on the Powder Original is 18" (45 cm) long by 11" (29 cm). This allows you to have a narrow stance like you would on your snowboard, but also gives you the variety to do upper body movements that are wide, or a wide stance if you wanted to.

Endless Powder Combo (2:55)

The Powder Original Endless Powder perfect combo package is designed to give you infinite exercise possibilities. When you combine the Resistance Bands with our Half Balls and our Balls, you can actually get 16 different unique combinations of rides. The Endless Powder will come with two of the 6.5" Half Balls. This allows you to create a rocker board or a wobble board. You'll also get a 3" Mini Ball which you can combine inside of the 6.5" Half Ball to create a thrasher combo, and that's a great unpredictable thrashing combo, just like it sounds.

(3:36) You'll also get two of the 5" Balls which allows you to create a double pivot board, and because of the unique shape you actually get a very, very extreme tilt when using two of the 5" Balls underneath the board. You can combine the 5" Ball inside of the 6.5" Half Ball to create the big drop unpredictable

combo. These are perfect if you're doing aerial moves or jumps and if you're landing a little bit unsteady, these will definitely improve your balance.

(4:08) The second option is to use the Ball at one end and the Half Ball at the other end of the board to create a single pivot setup, and this is a great transition to learn how to control the board before you start learning to ride onto one Ball. Lastly, you'll get the medium-sized 6.5" Ball which is perfect for getting you up nice and high for turning and carves. You'll stay up without grounding the board so you can ride all day long.

(4:34) When you're ready to expand your exercise options you'll add the Resistance Bands to the steel rail system of your Powder Original and those Bands will pull you down which will force you to stand tall, engage your posture, and you'll have that added upper body control. It's a great full body workout. When you add the Bands, the Half Balls, and the Balls you will have a perfect combo for infinite training.

(4:56) And now my favorite, let's get ready to ride.

(7:11) The Powder Original Endless Powder combo is a great tool for staying fit year round. We invite you to Jump Into the Next Generation, jump on a board, and start your training today.

Elysia Tsai, M.Ed., ATC is a Certified Athletic Trainer and the developer of Si Boards balance boards, unbreakable med balls and power rope balls. Our balance boards are the most versatile and progressive multi-direction training system. Our high performance products are made in the USA with superior function, quality and lasting value. We are always available to answer your questions.
