

Turbo Starter Board

Elysia Tsai, M.Ed., ATC introduces our Turbo Starter Board. A perfect small board for small kids, beginners, training outdoors, travel and stand up desks. This small board is fast and controllable. Kids can get a full body workout and develop their athletic skills and coordination.

(0:31) Hey Everybody, Elysia here from Si Boards and I'm here to introduce our Turbo Starter.

(0:46) Key Features

The Turbo Starter is a small board, and it is a perfect board for small kids and anybody who wants to just get started on their balance training. It's fast, it whips you around, and it really challenges your reaction speed and your coordination. It's actually so much fun to ride this small little board. One of the main differences between a Starter Board and an Original Board is the rail system. The Starter Board here on my right features a smaller, urethane rail that is adjustable. It's also bolted directly into the board. The Original Board's rail, in contrast, on my left side, is larger and wider and fixed permanently into the board.

(1:33) Ideal User Height

The Turbo Starter is a great board for anybody who is 4' (1.2m) all the way up to 6' (1.8m). Although, at the 6' range, you may feel that this board is a little bit small for you because you won't be able to get the natural stance, but you'll be able to completely control this board with ease. This is actually a better board suited for a 4' (1.2m) to 5'4" (1.6m) rider.

(2:02) Board Specifications

The size of the Turbo Starter is 27" (68 cm) tall by 15" (38 cm) wide. This board is nice and light at 7 lbs. (3.2 kgs) and this is a perfect board for travel, for home offices, or for any training on the go. Just put it in your bag, take it out to the park, and you've got your training tools. The Turbo Starter is flat and you'll notice that the urethane rail is bolted directly into the wood. The urethane rail is 16" tall (41 cm) by 9" wide (23 cm). The Turbo Starter features a durable urethane rail so if you're using it outdoors on concrete, it will hold up very well to any friction. This rail is also detachable and adjustable so if you wanted to, you could place it on a larger board and add an 8" extension or a 4" extension. On the Turbo Starter, the only extension that you could add is a 4" extension.

(3:16) All Starter Boards have a weight limit of 220 lbs. (100 kgs).

(3:25) 5-in-1 Combo

The Turbo Starter 5-in-1 Perfect Combo is designed to give you 5 different board surfaces within one package by combining our Half Balls and our Balls. The 5-in-1 package will come with two of the 5" Half Balls and two of the 3" Mini Balls. When you place two of the Half Balls underneath the board you will create a Rocker board. When you're ready to progress you would use one Half Ball underneath the board to create a Wobble board. To further your progression, you will take one of the 3" Mini Balls, place it on one side of the board, then take one Half Ball and place it on the other side. One side of the board will be teetering while the other side is actually in motion. This is a perfect progression before you learn how to ride on the Balls.

(4:16) Your next step in progression is to add two of the 3" Mini Balls underneath the board to create a Double Pivot System. When you're ready for the Multi-Direction board, just use one Ball underneath this board and you will create a multi-direction Balance Training System.

(4:33) And now my favorite, let's get ready to ride.

(6:51) The Turbo Starter board is perfect for small kids, especially as they grow and learn their coordination and athletic skill development. We've had small kids on there doing full body work and they fit very, very well on this small-sized board. As an adult, it's very fast, it's very fun, and it will definitely challenge your coordination. So I invite you to Jump into the Next Generation with us and get started on your balance training. Grab a Si Board today, and you'll have a ton of fun.

Elysia Tsai, M.Ed., ATC is a Certified Athletic Trainer and the developer of Si Boards balance boards, unbreakable med balls and power rope balls. Our balance boards are the most versatile and progressive multi-direction training system. Our high performance products are made in the USA with superior function, quality and lasting value.
